

# Big Blue

True full-range stereo monitoring that stays true,  
even when you pump up the volume.

Some of us like it loud. But monitoring at high volume usually means distortion, poor imaging and an unbalanced sound.

Big Blue changes all that.

By including the subwoofer as an integral part of the design – not as an afterthought – Blue Sky's latest and most powerful powered monitoring system delivers a thrilling, full-range performance that remains accurate, especially in the lower octave, even when you pump up the volume.

And all at a price that's far from inflated.

So if you want to be moved by your music, make the move to Big Blue.

“ This three-way, tri-amplified mid-field design packs crisp highs, thundering lows and superb transient response in a system that's not for the faint of heart. ”
